

Composite Strapping

Composite Strapping is a lightweight, "OH & S" safe strap with no sharp edges and requires low tool maintenance. It's a highly versatile product and can be used around small and large packs. Its versatility also allows you to strap obscure items, such as machinery or large parts to pallets.

The smaller coil size is a further advantage to store on a forklift or in a truck for strapping fencing, scaffolding and pallet racking, by onsite teams, with no need for added corner protectors to avoid strap scratching the goods.

- ❖ Light weight
- ❖ No sharp edges
- ❖ Re-usable
- ❖ Low tool maintenance
- ❖ Soft and pliable

Code	Description	Breaking Strain
