

Composite Strapping

Composite strapping is a lightweight and “OH&S” safe strap. It has no sharp edges and requires low tool maintenance. It’s highly versatile and can be used around small and large packs. Another advantage to using Composite Strapping is it can also strap obscure items such as machinery or large parts to pallets.

The smaller coil size makes it great to have on a forklift or in a truck for strapping fencing, scaffolding and pallet racking by on-site teams, with no need for added corner protectors to avoid the strap scratching the goods.

- ❖ Light Weight
- ❖ No Sharp Edges
- ❖ Re-usable
- ❖ Low Tool Maintenance
- ❖ Soft and Pliable

Code	Description	System Strength
PPS7	CORD STRAPPING 19MM x 500M	1070KG
PPS62	WIRE BUCKLES 19MM HD GALVANISED 4 (500)
